

1

```
name = input("Name ? ")  
print(name) #Paul
```

```
money = int(input("money? "))  
print(money) #7  
print(money + 1) #8
```

Input

User input

You can input information into your program from the console by using 'input'. Your program will wait until it receives an input. Note that in python this will be a string. So you may need to cast it to a number if you want to use it in calculations.
