

2

```
fruit = ['melon', 'apple', 'orange']
```

```
fruit.sort()
```

```
print(fruit)
```

```
#['apple', 'melon', 'orange']
```

```
fruit.sort(reverse=True)
```

```
print(fruit)
```

```
#['orange', 'melon', 'apple']
```

List Sort

Sorting a List

The python list provides built in functionality to sort the list ascending (default) or descending. This may be done alphabetically or numerically.
