

3

```
fruits = ['apple', 'banana', 'cherry']
```

```
#             (position,element)
```

```
fruits.insert(1, "orange")
```

```
print(fruits)
```

```
#['apple', 'orange', 'banana', 'cherry']
```

List Insert

Inserting into a List

You can insert an item into a list by giving the index to be inserted at and the element that you want to insert. Eg index 1 will be the second item in the list.
(index starts at 0)
