

3

```
#TKinter Module  
import tkinter as tk  
  
#main window  
root = tk.Tk()  
  
#main loop  
root.mainloop()
```

TKinter

Python GUI

The TKinter framework is built into python and provides a way to make a graphical user interface.

After making a main (root) window other components such as buttons and text can be added to run in a main loop.
