

2

```
number = 3.3857329
```

```
#2 decimal places example
```

```
print(round(number, 2))
```

```
#3.39
```

```
#or with f-strings
```

```
print(f"{number:.2f}")
```

```
#3.39
```

Rounding

Round function

Rounding using the built in function `round()`. Specify how many decimal places you require. Alternatively for output you can use f-strings which is a convenient
