

4

```
class Car:  
    def __init__(self, engine, battery):  
        self.engine = engine  
        self.battery = battery
```

Composition

OOП composition

This is a 'has a' relationship. A car 'has a' engine. The Engine is a Class. The car above is composed of other Classes. The car is not a type of Engine so inheritance is not appropriate.
